PROJECTS

Real-Time Chat Application, Fall 2018

- Created a web chat application using Vue.js and Firebase
- Used MaterializeCSS for its ability to create a clean UI quickly for experimenting purposes

HTML5/CSS3 Website, Summer 2018

- Currently developing a HTML5/CSS3 website using Bootstrap's fluid grid system.
- Purpose of this website is to challenge my front-end web development skills and practice using vanilla JavaScript as a tool for animation

Android Application, Spring 2017

- Designed and developed a native Android application for a crowd-sourced meal marketplace.
- Developed the front-end of application using Java/XML and for the back-end used the LAMP stack
