EXPERIENCE

Morrow Equipment Company   Salem, OR
Software Engineeer   March, 2017 | Present

- Core team member in charge of creating a new company intranet. My main task was to understand how data was being manipulated on our old intranet, which was written in classic ASP, and then create tables, views, or stored procedures in SQL Server so the data being altered would match what was being returned.
- Leveraged Javascript, jQuery, HTML, and CSS to produce the optimal functionality and design output within the new intranet.
- Designed and implemented a custom home page for the intranet in ReactJS.
- Oversaw our companies public WordPress site. Wrote custom PHP, jQUery, HTML and CSS as needed to enhance the customer experience, and make our employees more efficient within our online store.

Agency Multiplied   Salem, OR
Junior Software Developer   July 2015 | March 2017

- Assisted in building an online market place for Surety Bonds where users, agents, and companies could all collaborate to find the best product for their given needs. This was done within the AngularJS framework and a C# back-end.
- Built test suite using the Jasmine framework to ensure that the platform continued working properly with any additions, or changes to our code base.
- Designed and implemented widgets so customer's could personalize their profile and homepage. Widgets were available for each individual to drag and drop so they could view components and metrics that were most important to them.

EDUCATION

Oregon State Unvierstiy   Corvallis, OR
BS Computer Science *GPA: 3.2*   January 2015 - March 2019

University of Puget Sound   Tacoma, WA
Business Business *GPA: 3.4*   August 2008 - May 2012
